## Bootstrap Basics

Claire Carroll
Yale CS50

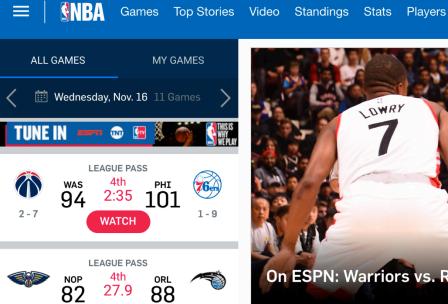

## What is Bootstrap?

- HTML, CSS, JS Framework for developing projects on the web
- Helps your layout transition between computers, tablets, and mobile
- Extensive pre-compiled or modifiable code base

## Why Use It?

- Easy!
- Lots of features and online support
- Open source project
- Library with cookie-cutter mockups you can customize
- Lots of Popular Sites use it!

## Getting Started

- Pick your poison
  - Precompiled, source code, Sass for Rails

- Ways to Download:
  - http://getbootstrap.com/gettingstarted/#download
  - npm install bootstrap@3
    - Install node.js and the grunt cli
  - bower
- Templates/Themes!

#### What have we here???

- Minified files
  - .min
  - No need to include multiple files for different features

### Baseline

How to Include Bootstrap functionality

## You've Used It Before!

layout.html

## Getting Started...

- Boilerplate template
- chmod permissions on folder!
- apache50 start [DIR]
- Hosted site!

#### Head cont.

```
<head>
      <meta charset = "utf-8">
      <meta http-equiv = "X-UA-Compatible"</pre>
content = "IE = edge">
      <meta name = "viewport" content = "width</pre>
= device-width, initial-scale = 1">
      <title>Bootstrap 101 Template</title>
      <!-- Bootstrap -->
      link href =
"//maxcdn.bootstrapcdn.com/bootstrap/3.3
```

# Now let's see how to actually start... head

```
<!DOCTYPE html>
<html>
<head>
   <title>Try v1.2 Bootstrap Online</title>
   link
href="/bootstrap/css/bootstrap.min.css"
rel="stylesheet">
   <script
src="/scripts/jquery.min.js"></script>
   <script
src="/bootstrap/js/bootstrap.min.js"></script>
</head>
<body>
```

## body

```
<body>
      <h1>Hello, world!</h1>
      <!-- jQuery (necessary for Bootstrap's
JavaScript plugins) -->
      <script src =
"https://ajax.googleapis.com/ajax/libs/jquery/1.11.1
/jquery.min.js"></script>
      <!-- Include all compiled plugins (below), or
include individual files as needed -->
      <script src =
"//maxcdn.bootstrapcdn.com/bootstrap/3.3.1/js/bootst
rap.min.js"></script>
   </body>
```

#### Let's Get Down to Business

- Basics
- Grid Layout
- Navbar
- Fonts
- How you can figure out Buttons (and other Bootstrap questions) on your own!
- Design Tips

#### **BS** Basics

- Mobile First
  - Mobile-thinking functions all throughout library
- Ensures consistency across browsers
- JS Plugins
  - One script reference instead of a hundred
- Customize
  - If you want to customize something (i.e. to get to nestable components) you can!
    - Easier with full un-compiled code
- You still need a .css, this just does a ton of work for you!

## Grid Layout

- 12 different columns make up a page
- Mobile → tablet → web
  - Address "critical" content first
- Rows!
  - Horizontal groups of columns
  - Used within a .container class (for padding)
  - Columns as only immediate children
  - Warning: Facilitate padding "gutters" between column content (15px on each side)

## Grid Practicalities

	Phones	Tablets	Small Desktops	Large Desktops
Grid layout shifting	Always horizontal	Collapsed at beginning; always horizontal above breakpoints	Collapsed at beginning; always horizontal above breakpoints	Collapsed at beginning; always horizontal above breakpoints
Maximum container width	Automatically calculated (none)	750px	970px	1170px
Class prefix	.col-xs-	.col-sm-	.col-md-	.col-lg-

#### Grid Reminders + Tricks

- .col-\*\*-offset-\*
  - Push columns over for more spacing
- <div class = "clearfix visible-xs"></div>
  - Ensure columns of different sizes "clear" each other

## Navigation Bars (Nav Bars)

- Essentially just a row divided into several subcolumns
- But it can be more than that
  - Automatically "collapse" in mobile apps
  - Optional collapse on other platforms
  - Rigidly locked in place at top of app
    - No worries about variations in formatting on each page
  - Forms integrated into header (Search box)

## Bootstrap Nav Bar

- Header
  - Role = navigation
    - Helps with access to BS functionality
- Categories
  - Unordered List
  - Class = .nav .navbar-nav
- Dropdown
  - Sub- Unordered List
  - Class = dropdown-menu

#### Nav Bar Header

#### Nav Bar UL

## Nav Bar Dropdown

- Caret
  - Feel free to add a class = caret for a dropdown arrow

- Optional Collapse
  - Use .navbar-collapse and .collapse to trigger this

```
<div class = "collapse navbar-collapse>
```

 Comes before the dropdown list, (ul) but after the navbar header

- Fixed to the Top of the Page
  - Add ".navbar-fixed-top" to .navbar class

```
<nav class = "navbar navbar-default navbar-fixed-top"
role = "navigation">
```

 Make sure you add padding to the body so the navbar doesn't accidently cover content (50px+)

- Search Form
  - Don't use Bootstrap form classes!
  - .navbar-form does the job!

```
<form class = "navbar-form" role = "search">
```

#### Search Form

```
<div>
      <form class = "navbar-form navbar-left" role =</pre>
"search">
          <div class = "form-group">
             <input type = "text" class = "form-control"</pre>
placeholder = "Search">
          </div>
          <button type = "submit" class = "btn btn-</pre>
default">Submit</button>
      </form>
</div>
```

## Bootstrap Text

- Helpful Tags
  - Styled heading/subheading
  - <Address>
    - Mailing address
  - <abbr>
    - Abbreviation
- Code
  - < < code >
  - Start: <code>&lt;
  - End: &gt</code>

## Bootstrap Fonts

- Default:
  - Helvetica Neue, Helvetica, Arial, Sans serif
- Customize
  - Like normal
    - Get a font link
    - Include it in your .css

## Figuring out New Things

So you have a question....

## Bootstrap Support Strategy

- I. Figure out what functionality you want
  - I. Button styling
- 2. See if you can find an example
  - I. websites you like
  - 2. Templates
  - 3. Themes
- 3. If you find an example, View Page Source (or check source code) and see how they implement
- 4. Google + StackOverflow
  - 1. Lots of confused users + Big library = Lots of Forums
- 5. TutorialsPoint w3 schools
  - I. Background
- 6. Mess with BS + CSS yourself
