

crack

TODO

- get the hashed password
- crack the password

TODO

- get the hashed password
 - ▣ command line argument
- crack the password

usage

```
$ ./crack
```

```
Usage: ./crack hash
```

```
$ ./crack 50fkUxYHbnXGw  
rofl
```

TODO

- get the hashed password
- crack the password

assumptions

- hashed with C's DES-based crypt function

man crypt

- DES-based algorithm: first two characters of hashed password is the "salt" used
- 2 arguments passed to crypt: key, salt

crack the password

- hashing a word will always return the same hash

assumptions

- no longer than four characters
- composed entirely of alphabetical characters

generate plaintexts to be hashed
