Mashup

TODO

- distribution code
- **mashup.db**
- **application.py**
  - **articles**
  - **search**
- **scripts.js**
  - **configure**
  - **addMarker**
  - **removeMarkers**

SQL, HTML, RSS, JavaScript, Python, Ajax, jQuery, JSON…

- parse RSS feeds from Google News using Python

- return articles' titles and links to our web app via Ajax as JSON

TODO

- distribution code

- `mashup.db`
- `application.py`
  - `articles`
  - `search`
- `scripts.js`
  - `configure`
  - `addMarker`
  - `removeMarkers`

`index.html`

- [ ] embedded Google map
- [ ] HTML form

application.py

- **index**
  - **API_KEY**
- **articles**
  - TODO

- **search**
  - TODO

- **update**
  - finds up to 10 places within view

- **jsonify**
  - from **Flask**

`scripts.js`

- global variables **`map`**, **`markers`**, **`info`**
- Google Maps API

TODO

☑ distribution code

☐ **mashup.db**

☐ `application.py`
   ◻ `articles`
   ◻ `search`

☐ `scripts.js`
   ◻ `configure`
   ◻ `addMarker`
   ◻ `removeMarkers`

mashup.db

- decide appropriate database schema

- import **US.txt** into table **places**
