- *Would have loved to have more programming concepts touched and have greater practice. This should not be a half semester course, please make it a full semester course and allow alumni to tune in online :)*
- *Some parts of the course feel a little slow...*
- *A lot of content covered in a short period. At times, it is difficult to keep up.*
- *Can get really distracting sometimes with allowing technology in the classroom.. wonder if there's a way to have folks turn wifi off if need be or just say no tech unless we're actually coding?*
- *Class is lecture format and is misaligned to the case method and an inefficient way to learn. We don't do any reading prior to class. I would get more out of class if we read or watched videos ahead of time, and then came to class to discuss and deepen our learning.*
- *Sometimes it seems like we don't cover necessary material in class, making it more difficult to complete assignments.*
- *I'm not really seeing where this is going and how it will ultimately be made pertinent to the MBA.*
- *We are moving very quickly, yet I still haven't really learned how to manage CS processes any better*

Ask a Question

*Where can I find the "extra class" videos, (e.g. R and Statistical Analysis lesson) today? :)*

*Would it be possible to upload the videos without the slides on the side. It's very hard to see what is written on the "white-board" from the videos, when the screen is split into two.*

*Is cs50.io down right now?*

# **c9.io Domain being blocked by Comcast**

Incident Report for Cloud9 IDE, LLC

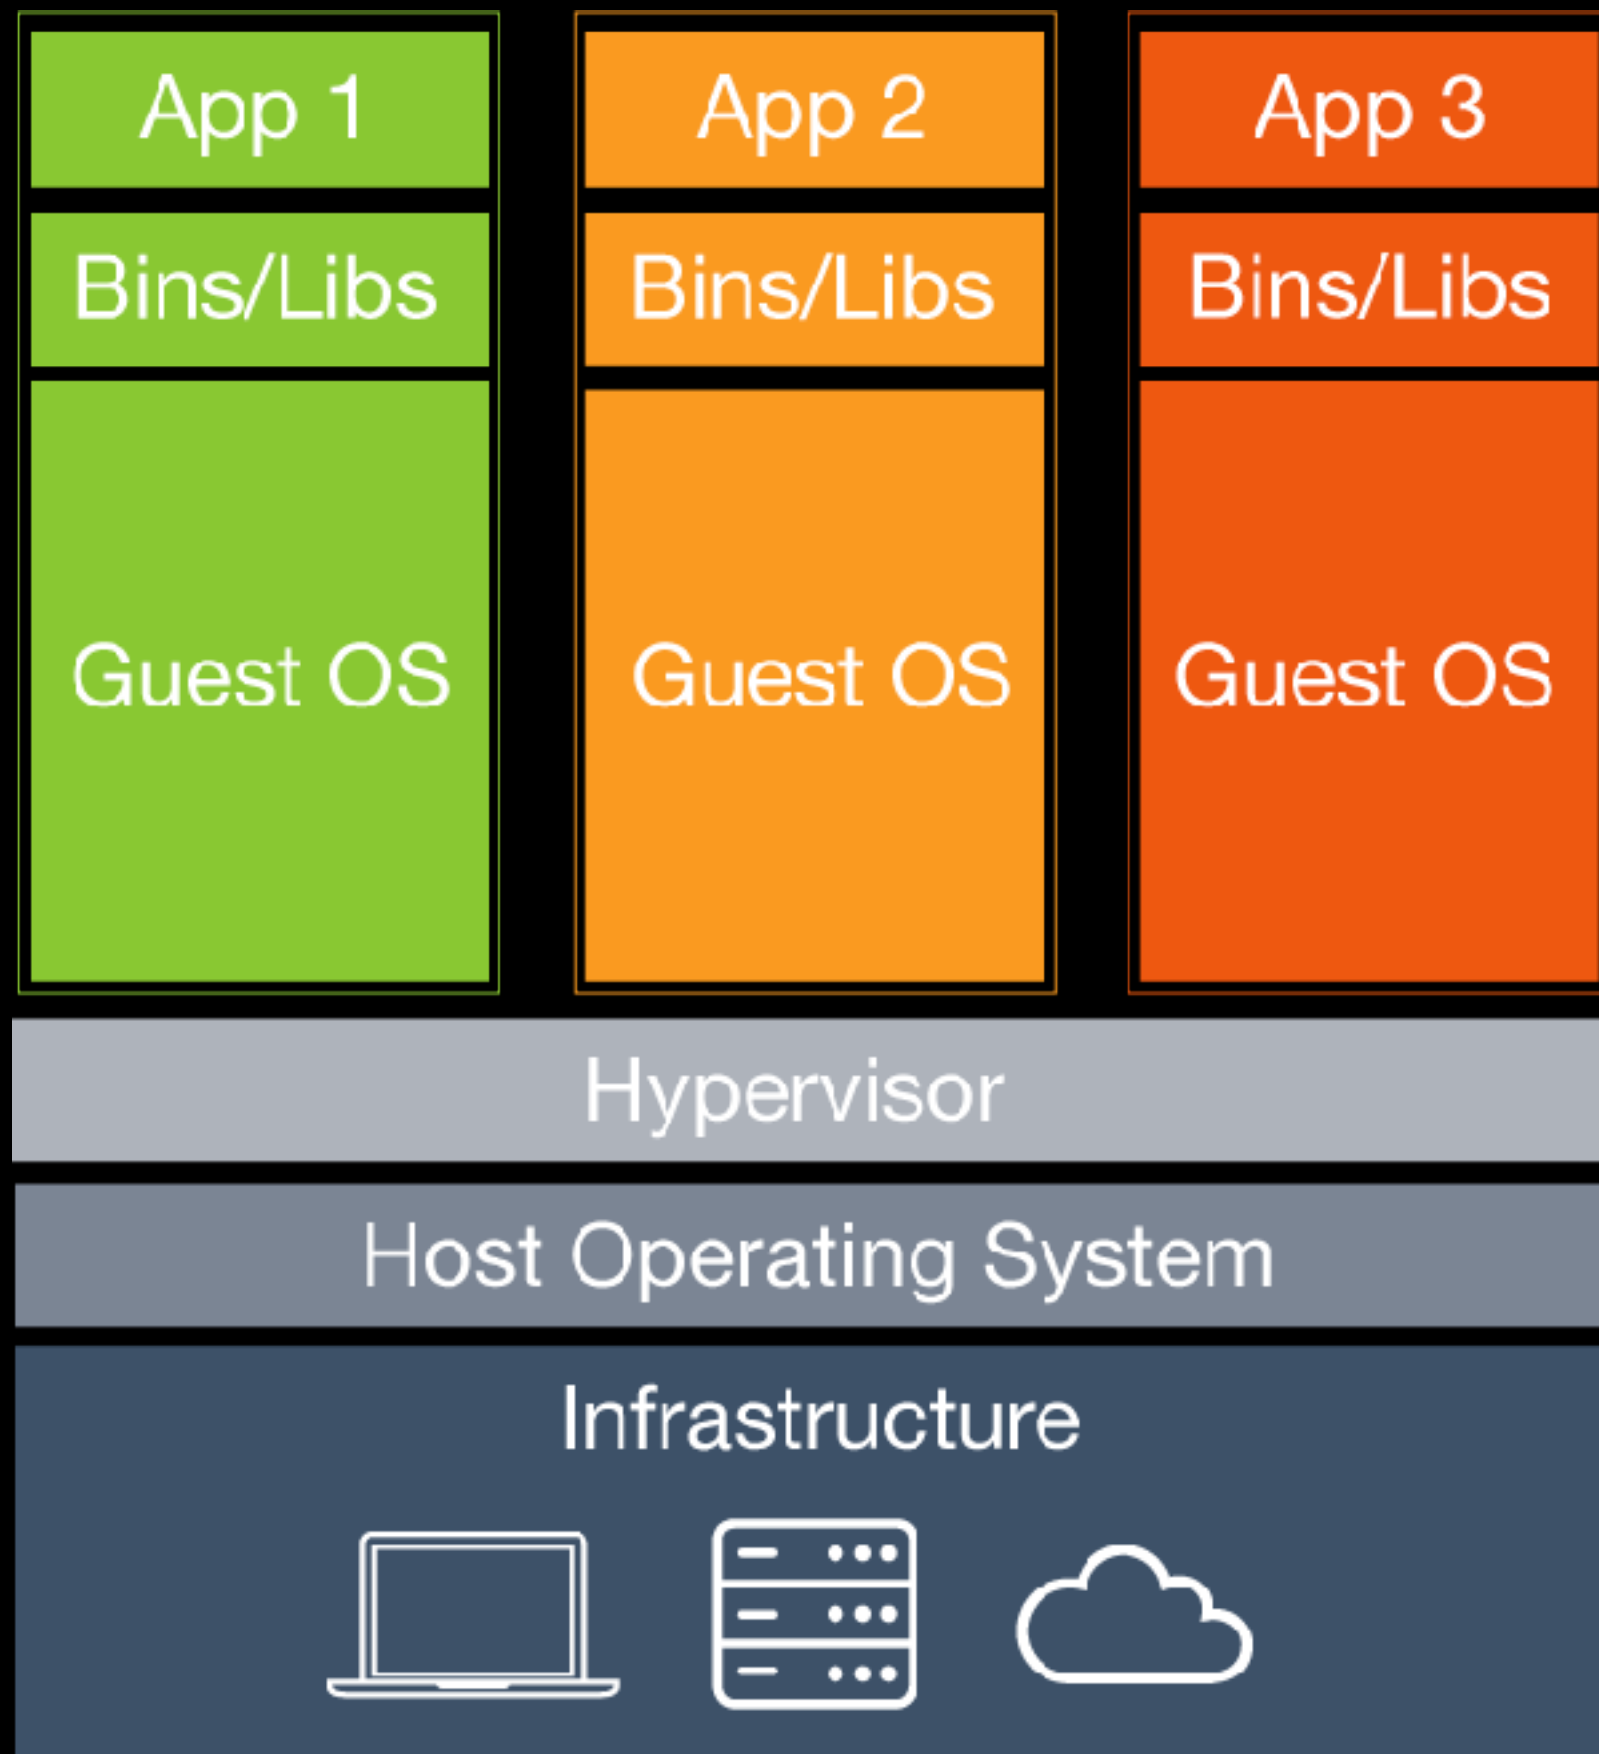

**Resolved**

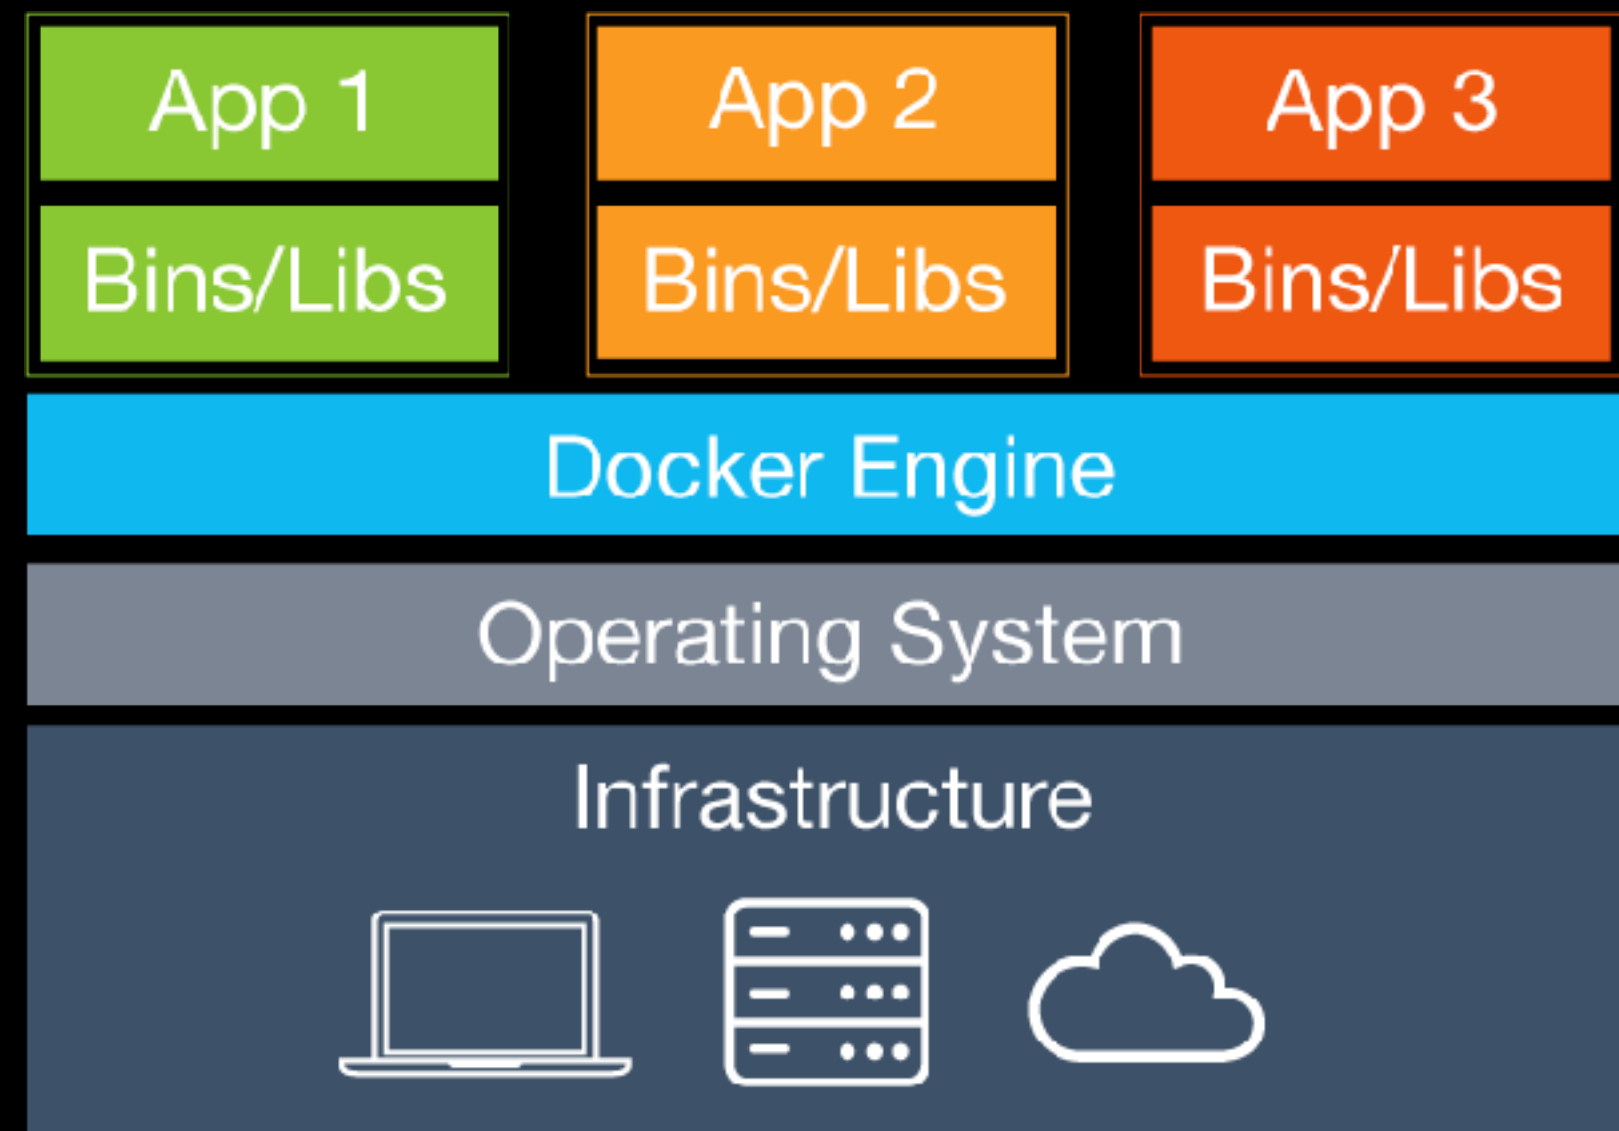

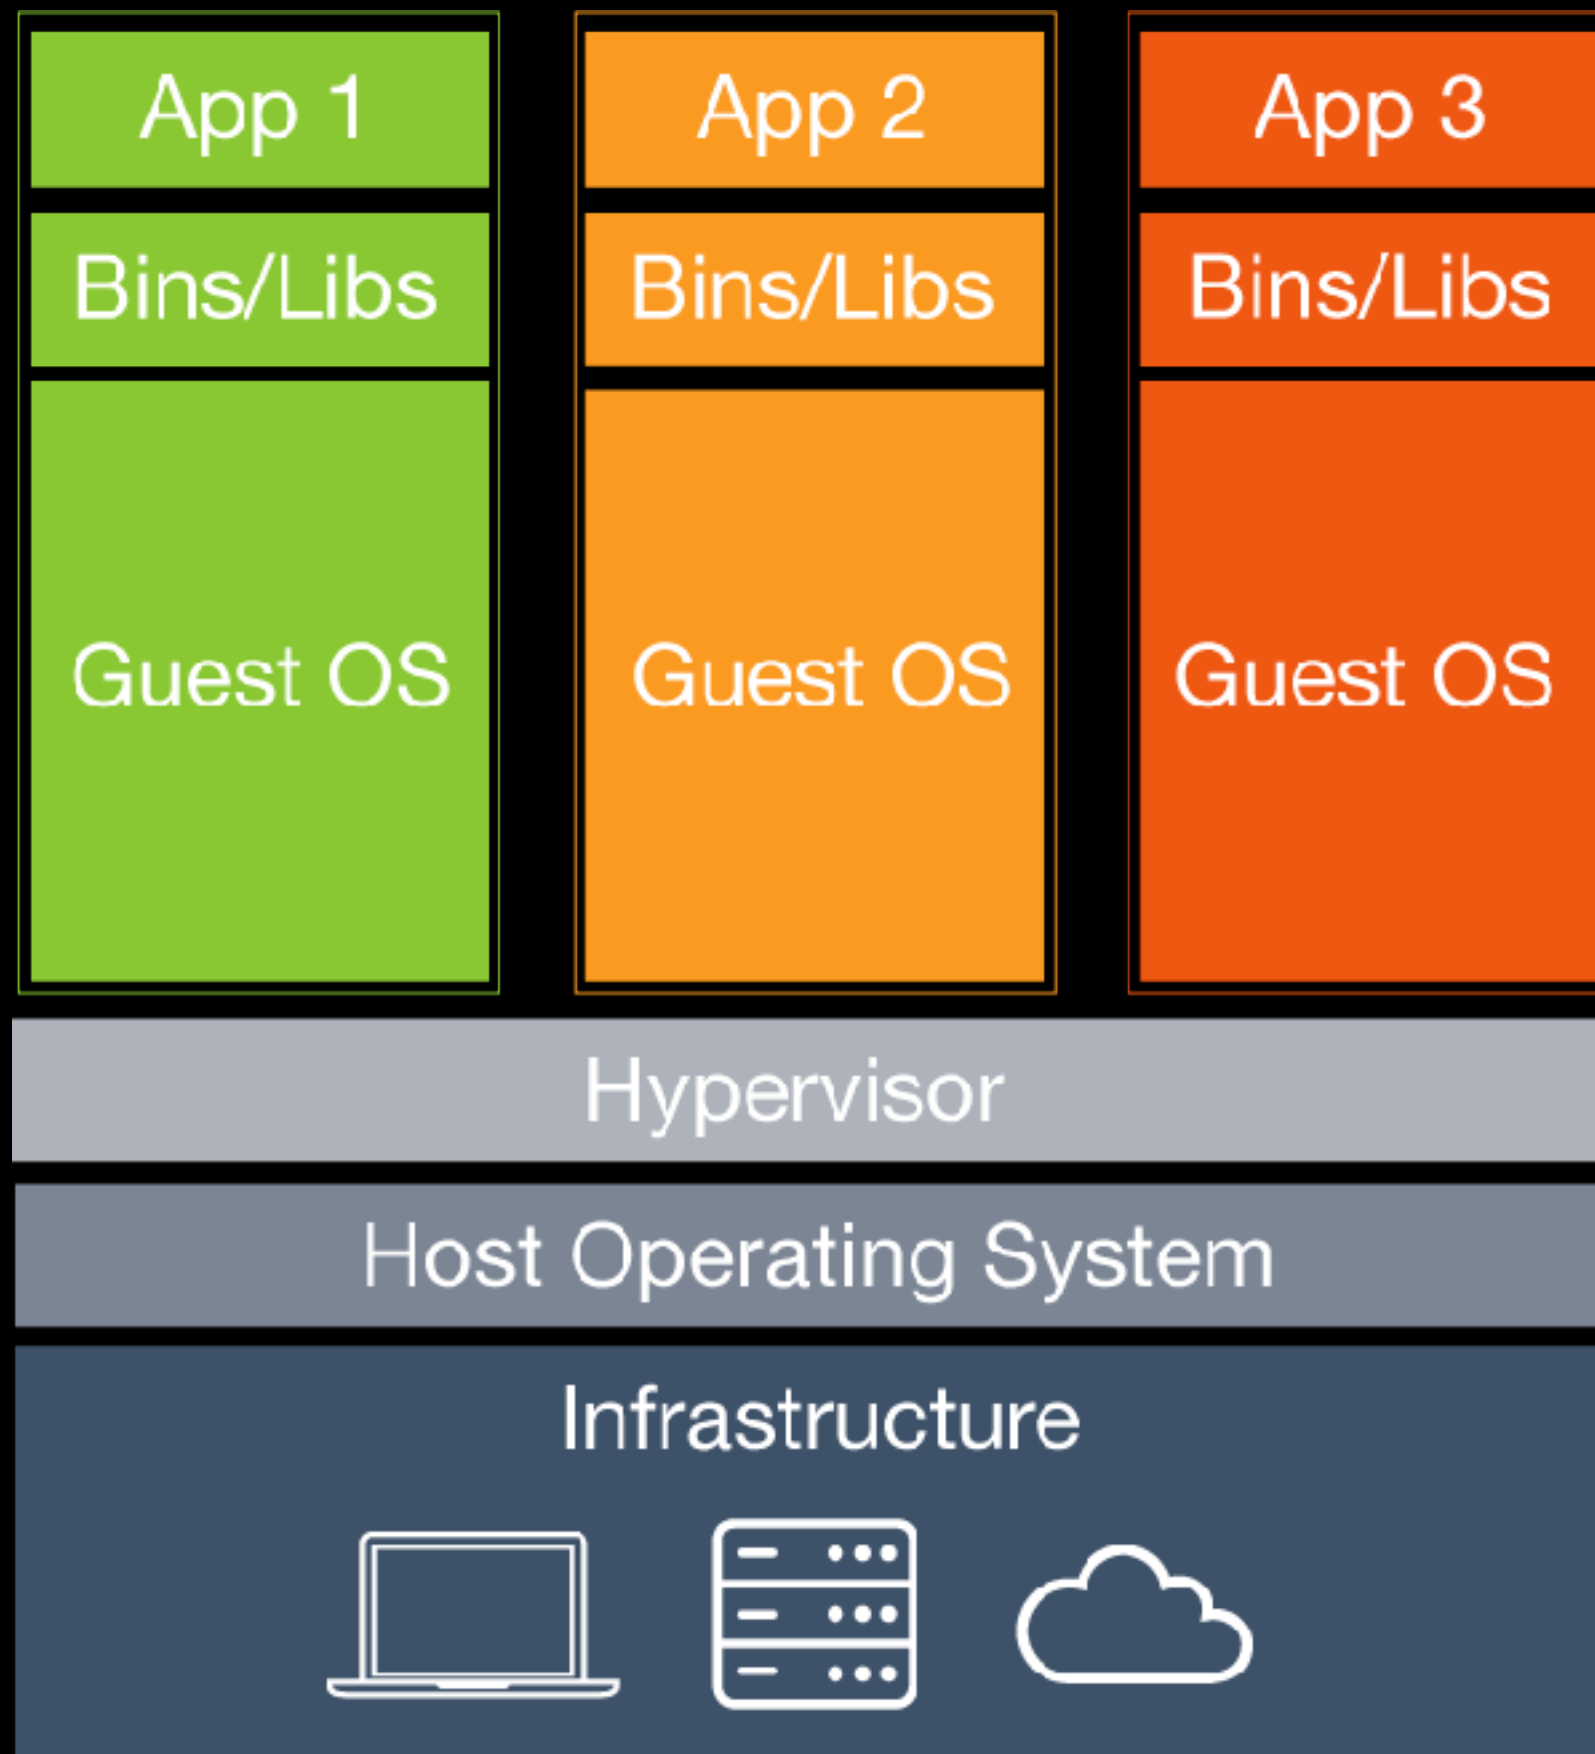

This incident has been resolved.
