» Yeah.

Applause

» My name is David Malan and this is CS50. 77% of the people around here in this room have no prior experience and that was the same way last year with your 494 predecessors all of whom accomplished the sorts of things that you saw depicted in those screens there. There's a lot of misconceptions about computer science that it is dominated by folks with their heads down at computer terminals toiling away, completely anti-social. A reputation that it is dominated by men and not so much women, and yet these are things that are changing. In fact, last year alone we had a record number of women in Computer Science 50, up to 37%, almost 40, and I don't doubt before long that we will be at 50/50 perhaps even this year here too. And realize too, that if you're thinking what the hell am I doing in a computer science class, realize
