AWS HISTORY

How did Amazon...

?

...get into cloud computing?

Over 10 years in the making

Enablement of sellers on Amazon

Internal need for scalable deployment environment

Early forays proved developers were hungry for more

AWS Mission

Enable businesses and
developers to use web services*
to build scalable, sophisticated
applications.

*What people now call “the cloud”

AWS provides broad and deep services to support any cloud workload

Infrastructure-as-a-service Magic Quadrant 2013

“AWS is the overwhelming market share leader, with more than five times the compute capacity in use than the aggregate total of the other fourteen providers.”

Gartner “Magic Quadrant for Cloud Infrastructure as a Service,” Lydia Leong, Douglas Toombs, Bob Gill, Gregor Petri, Tiny Haynes, August 19, 2013. This Magic Quadrant graphic was published by Gartner, Inc. as part of a larger research note and should be evaluated in the context of the entire report. Gartner does not endorse any vendor, product or service depicted in its research publications, and does not advise technology users to select only those vendors with the highest ratings. Gartner research publications consist of the opinions of Gartner’s research organization and should not be construed as statements of fact. Gartner disclaims all warranties, expressed or implied, with respect to this research, including any warranties of merchantability or fitness for a particular purpose.

Perspective on Scaling

On average, AWS adds enough new server capacity every day to support Amazon's global infrastructure when it was a \$7B business (2004)

Why are customers adopting cloud computing and AWS so quickly?

Lower costs with AWS up-front and increase savings as your usage grows

1

Replace up-front capital expense with low variable cost

“Average of 400 servers replaced per customer”

2

Economies of scale allow us to continually lower costs

42 Price Reductions

3

Add 1,000 Servers for Traffic Peaks

Remove 1,000 Servers

Deploy a 10,000 Core GIS Cluster

Shut Down a 10,000 Core GIS Cluster

A Culture of Innovation: Experiment Often & Fail Without Risk

What are customers using AWS
for?

University of Notre Dame Uses AWS to Scale Up for a 500% Increase in Traffic on BCS Game Day

UNIVERSITY OF
NOTRE DAME

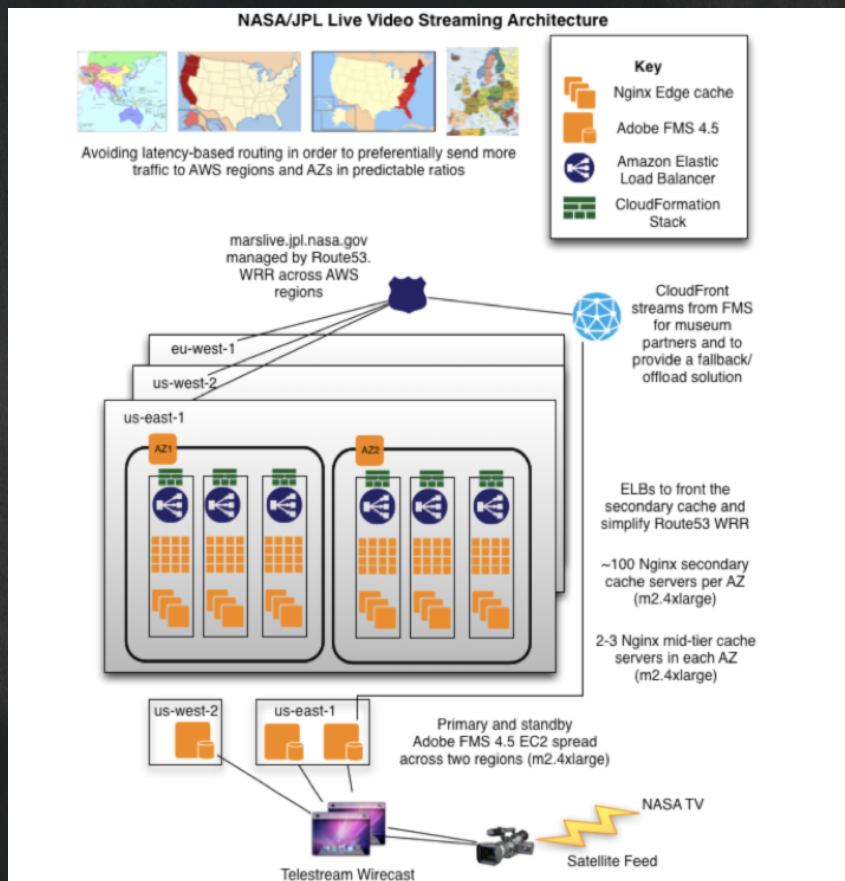

USING **AWS ENABLED**
US TO **HANDLE** UNEXPECTED
TRAFFIC **RELIABLY**—
EVEN WHEN WE **GREW**
FROM 38,000 TO
MORE THAN 150,000
VISITORS IN A DAY.

- Mike Chapple
Senior Director for Enterprise
Support Services
Notre Dame

- The University of Notre Dame is an independent Catholic university in Notre Dame, IL. Which enrolls approximately 12,125 students
- Notre Dame wanted to be sure that its systems could handle big bursts of traffic whenever the university was in the news. The university also wanted to be prepared in terms of disaster response
- The university chose AWS to host its website, scaling to handle a 500% increase in site visits during the BCS National Championship football game—and costing 40% less than the university's on-premise infrastructure

NASA JPL uses AWS for Image Processing and Streaming of the Mars Landing

NASA's Jet Propulsion Laboratory used AWS to stream the images and video associated with the **Mars Curiosity** landing. Cloud enabled JPL to **provision capacity rapidly** and leverage the AWS to deliver successfully engaging experiences of Mars to the public.

Obama for America used AWS to **run Mission Critical Applications**

“The AWS Cloud let us build solutions for an environment that moves so rapidly that you can’t plan for it. It made a big difference to the success of the campaign.”

- Mike Slaby, Chief Integration and Innovation Officer, Obama for America

Millions of Users Served

Over 200 applications built on the platform

Scaled up, and scaled down

AWS Service Overview

Networking Services

Amazon VPC

Private, isolated
section of the AWS
Cloud

AWS DirectConnect

Private connectivity
between AWS and your
datacenter

Amazon Route 53
