

crack

TODO

- get the hashed password
- crack the password

TODO

- get the hashed password
 - ▣ command line argument
- crack the password

TODO

- get the hashed password
- crack the password

assumptions

- hashed with crypt module
 - ▣ `import crypt`
- `crypt.crypt(word, salt)`

crack the password

- hashing a word will always return the same hash

assumptions

- no longer than four characters
- composed entirely of alphabetical characters

generate plaintexts to be hashed
