# Routes and Requests

https://birthdays.com/

protocol

<https://birthdays.com/>  
domain

`https://birthdays.com/  
_  
route`

# Routes

- Routes can define pages of your web application.  
For example,
  - /
  - /about-us
  - /register
  - /submit

/

http-server

```
flask run
```

# Flask

- Flask can **listen for requests** to a certain route.
- Flask can **execute Python code** depending on the route requested.
- Flask can **render HTML files** depending on the route requested.

app.py

app.py

```
from flask import Flask
```

```
app = Flask(__name__)
```

```
@app.route("/")
```

```
def index():
```

```
    ...
```

app.py

```
from flask import Flask

app = Flask(__name__)

@app.route("/")
def index():
    return "Hello, world!"
```

app.py

```
from flask import Flask, render_template

app = Flask(__name__)

@app.route("/")
def index():
    return render_template("index.html")
```

# Request Methods

- Browsers can use different methods to request a route.

**GET requests**

**GET requests**

**POST requests**

**POST requests**

# Forms

```
<form>  
</form>
```

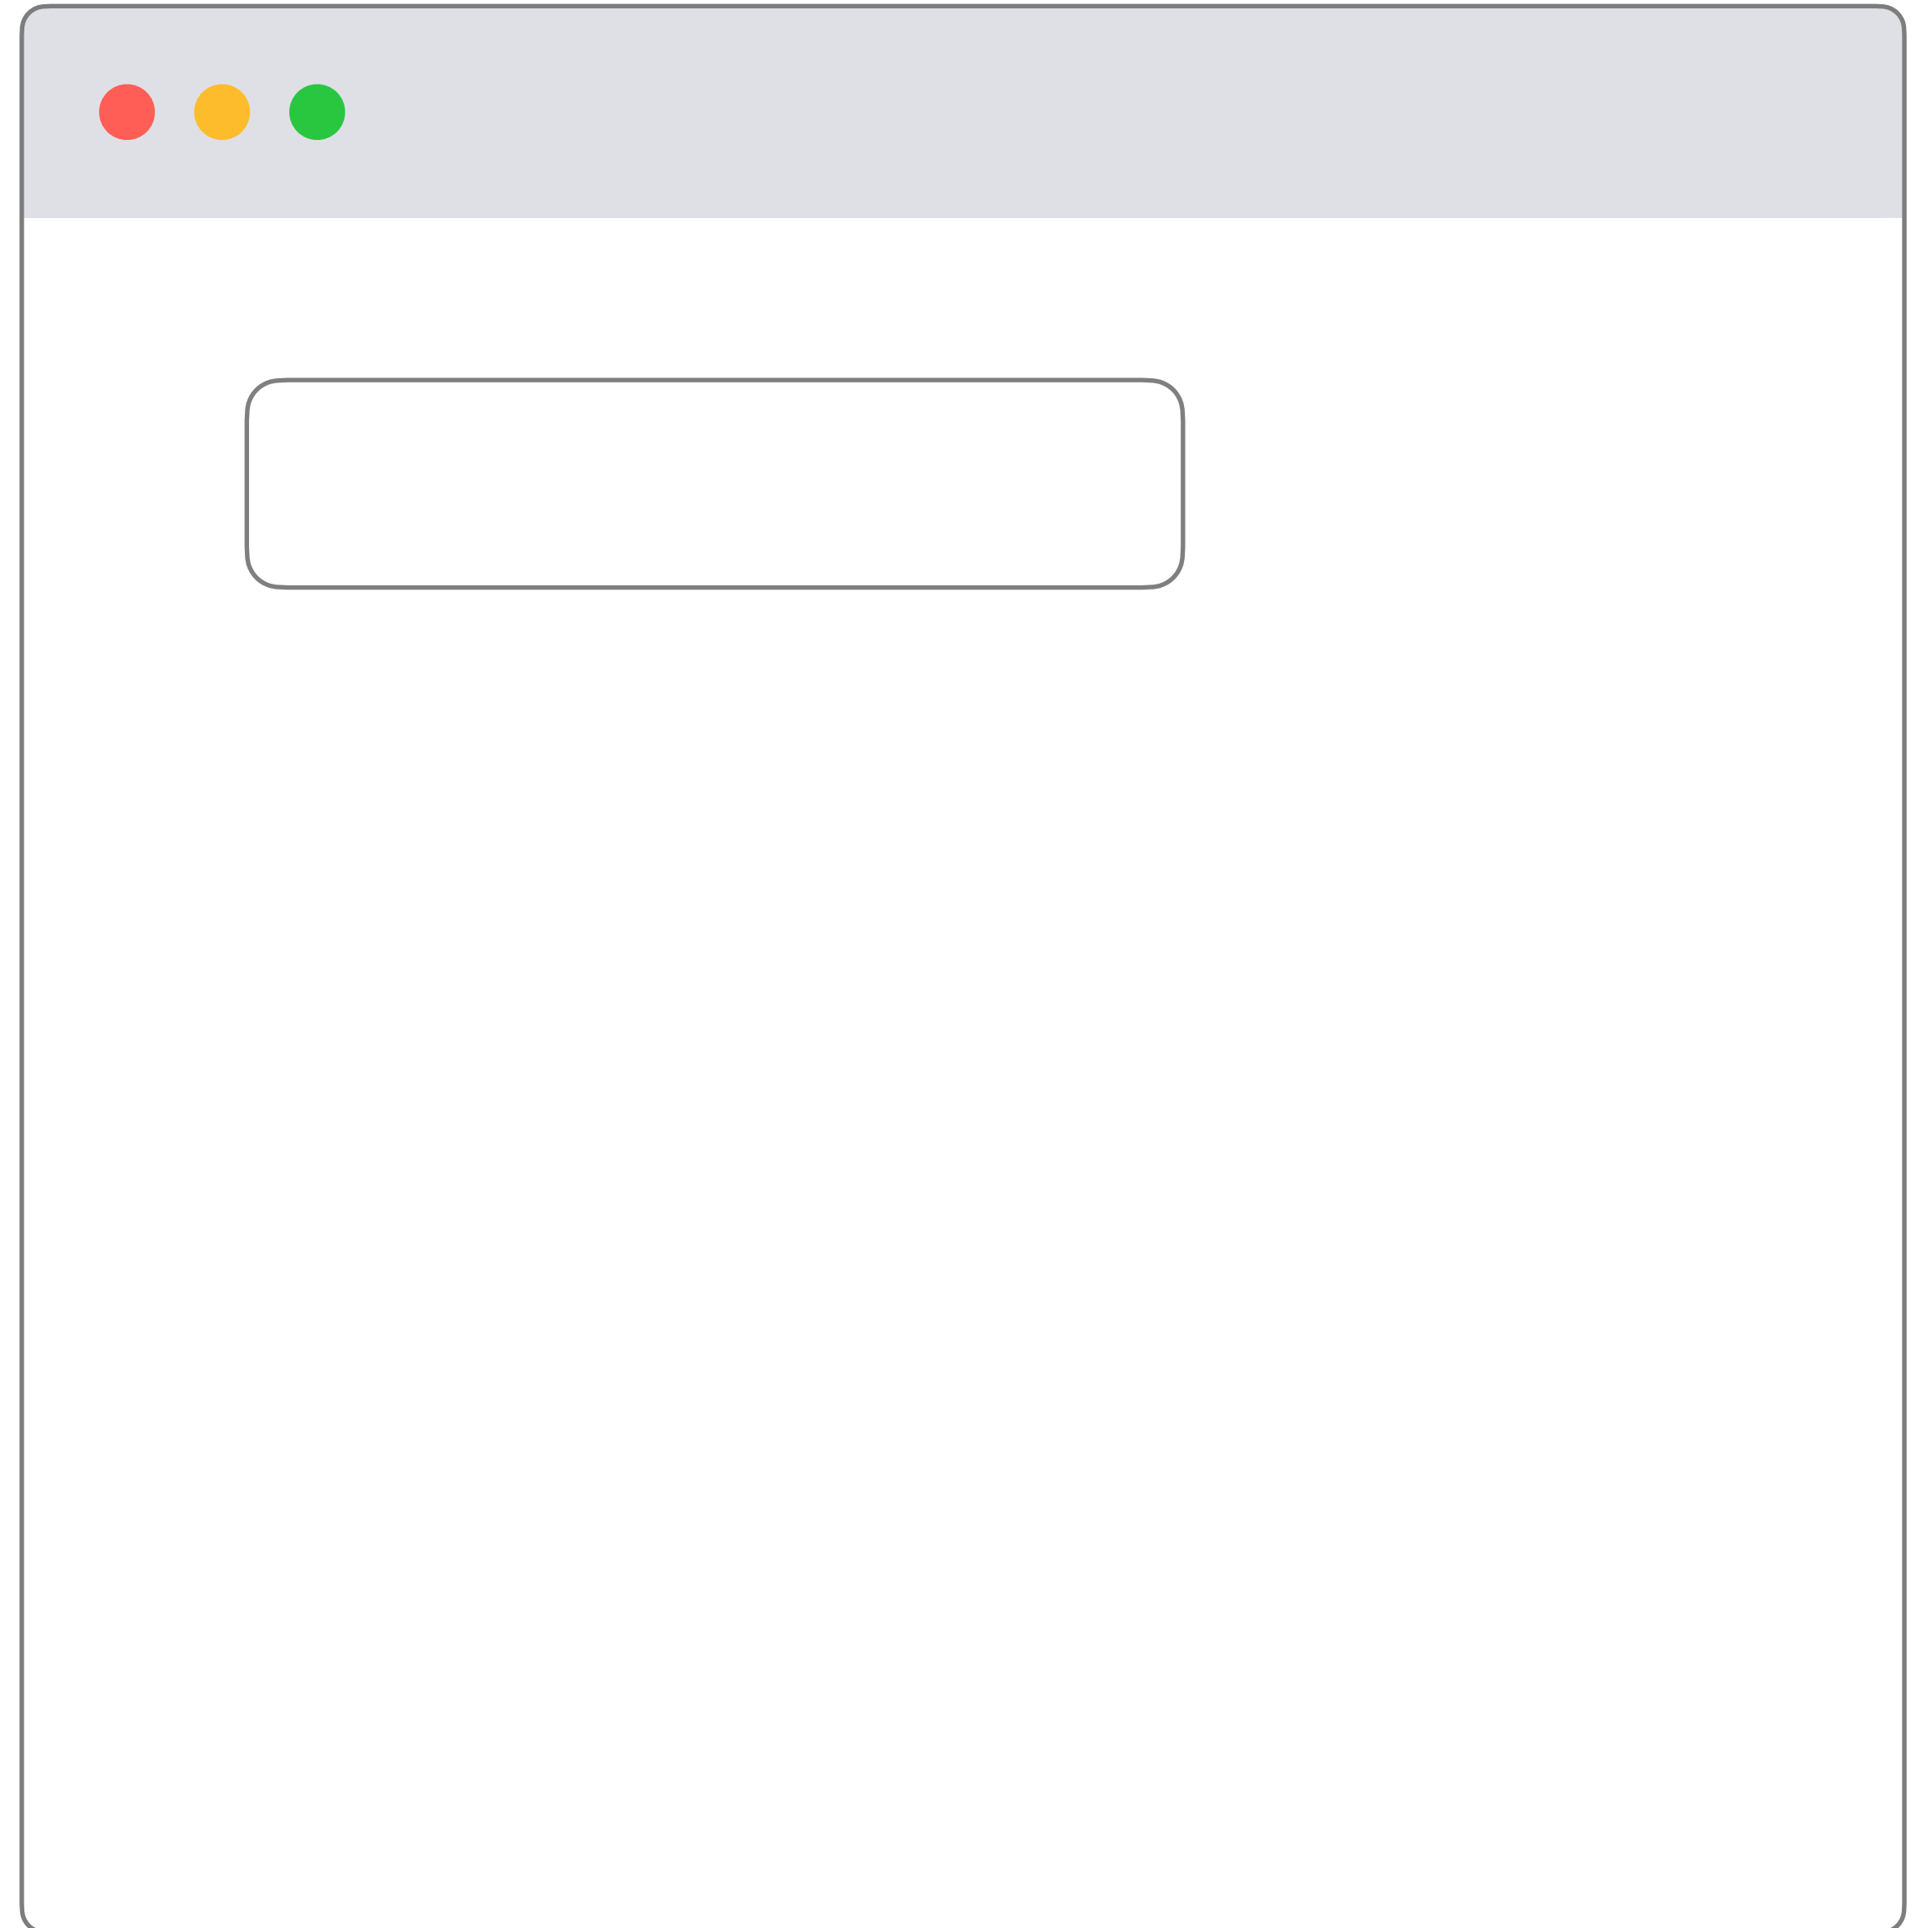

```
<form>
  <input type="text">
  <button type="submit">
    Submit
  </button>
</form>
```

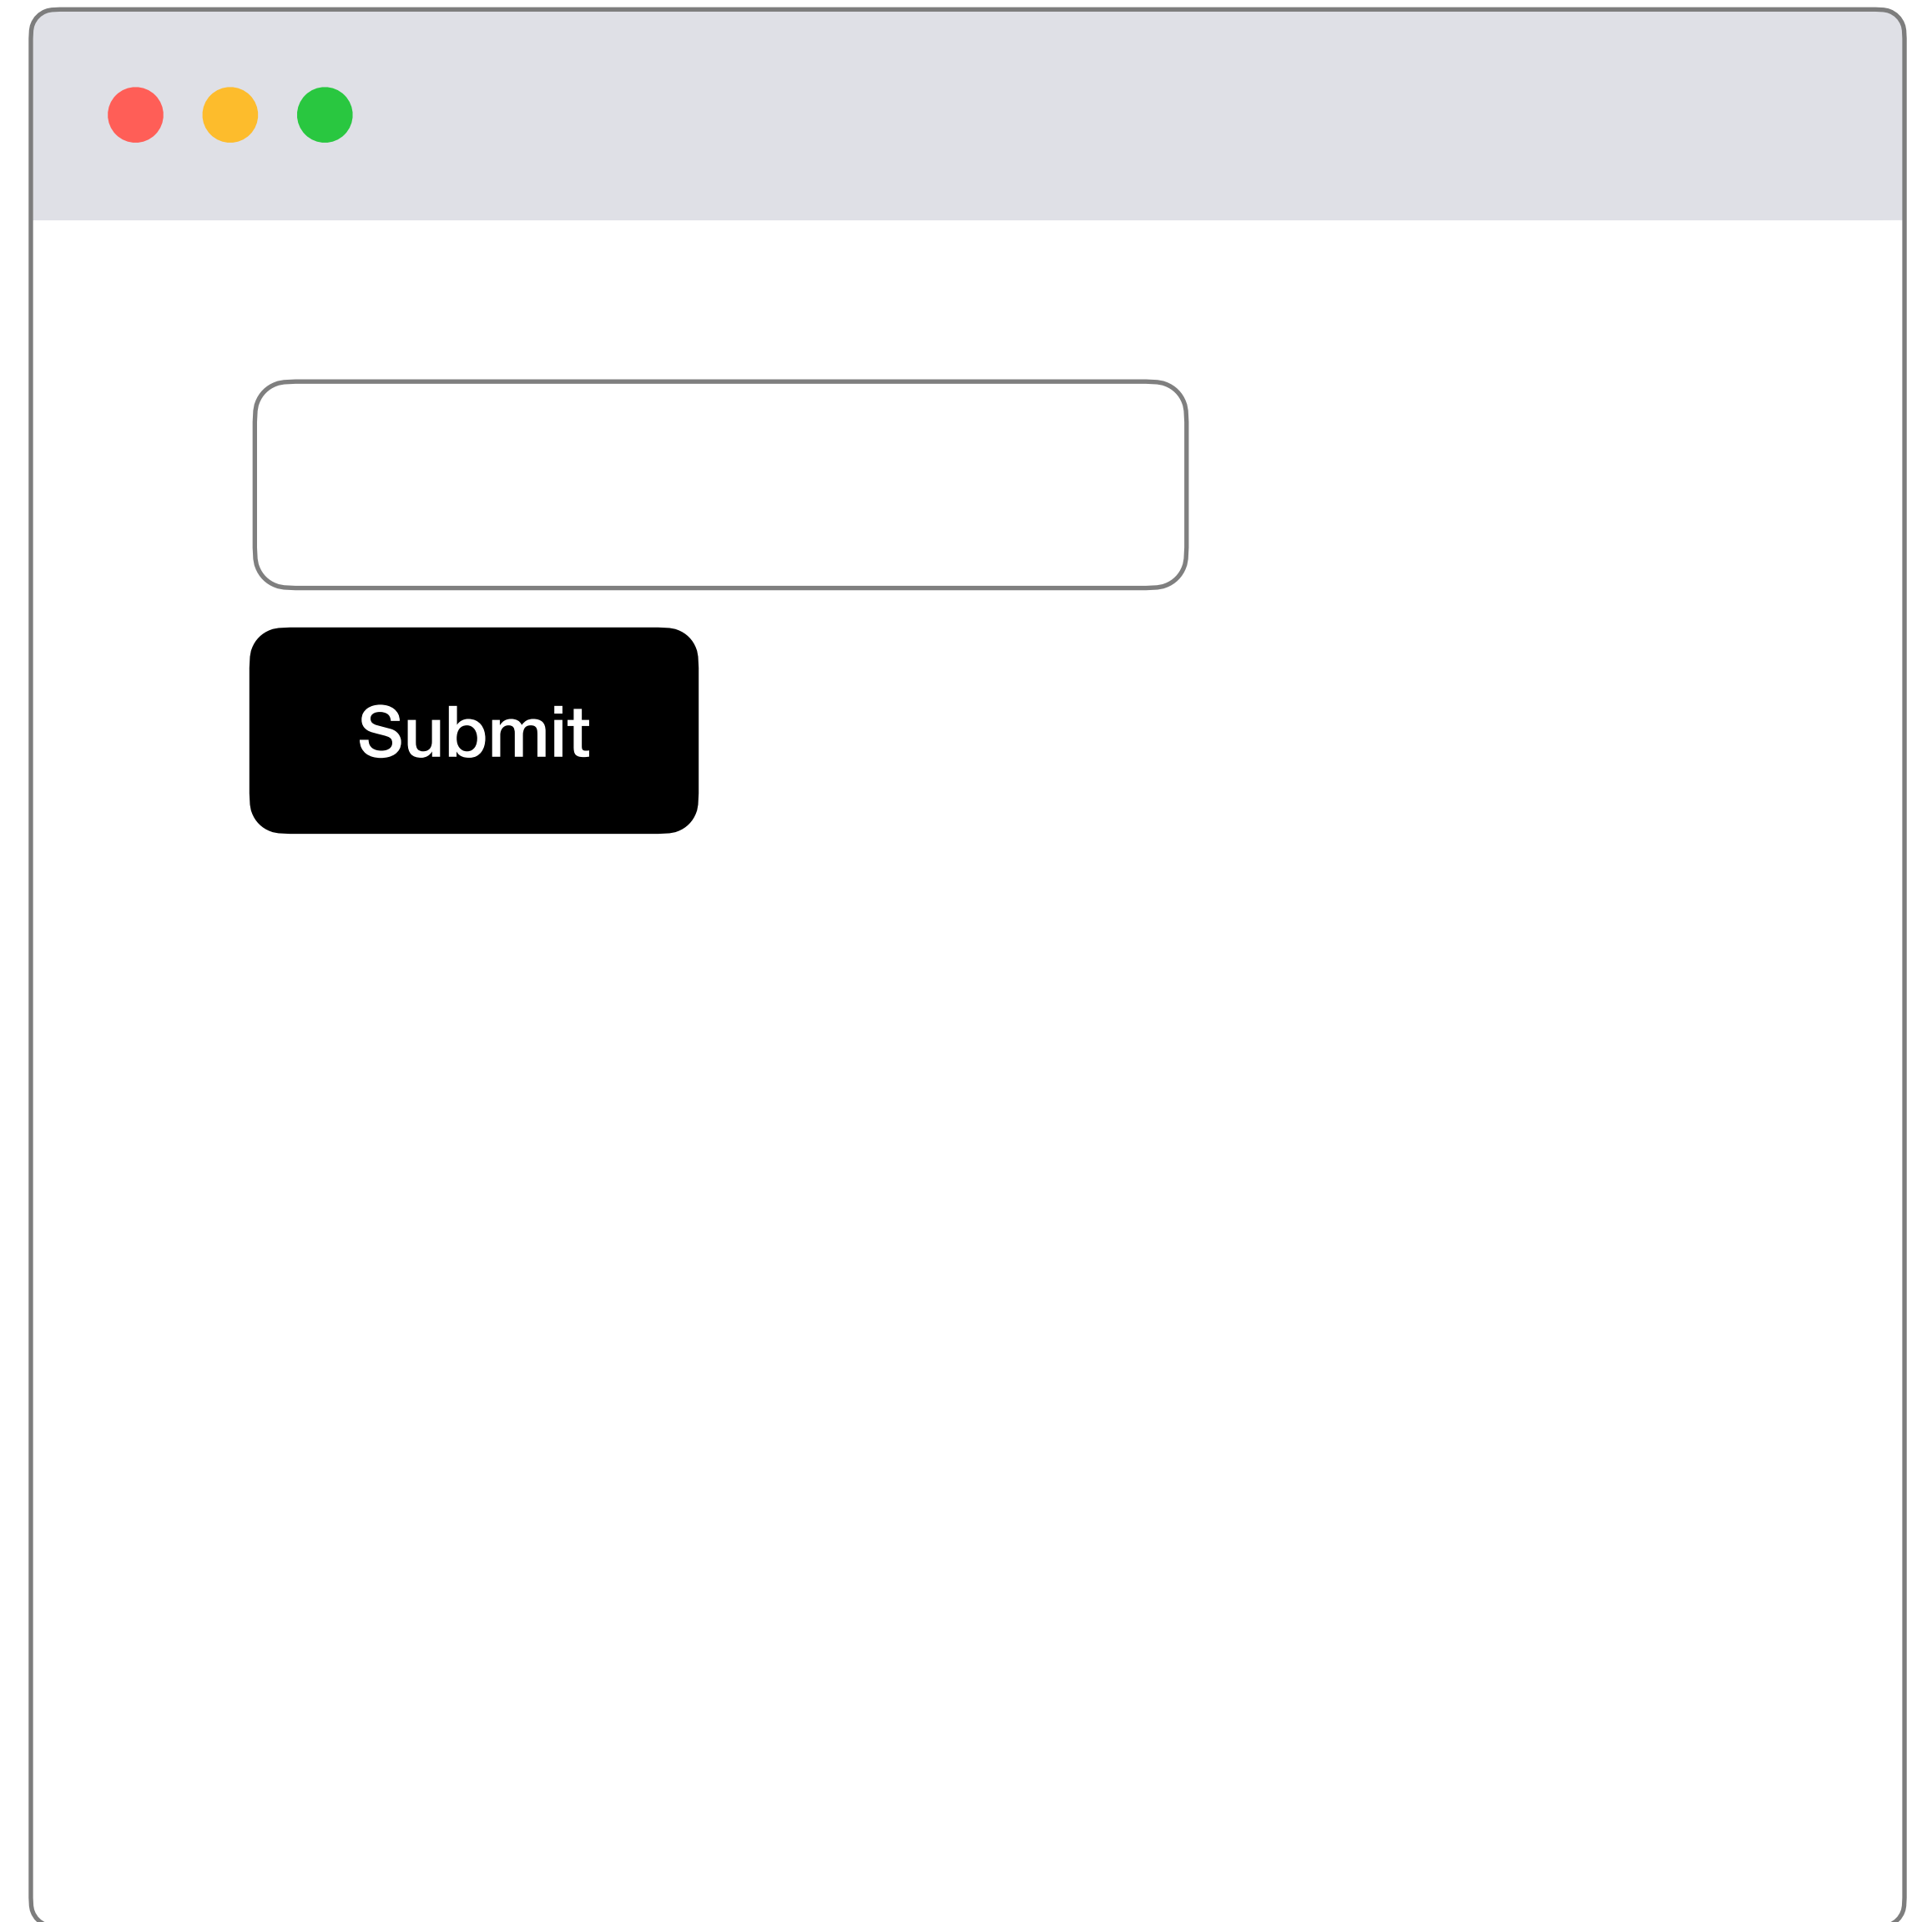

```
<form>  
  <input type="text">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

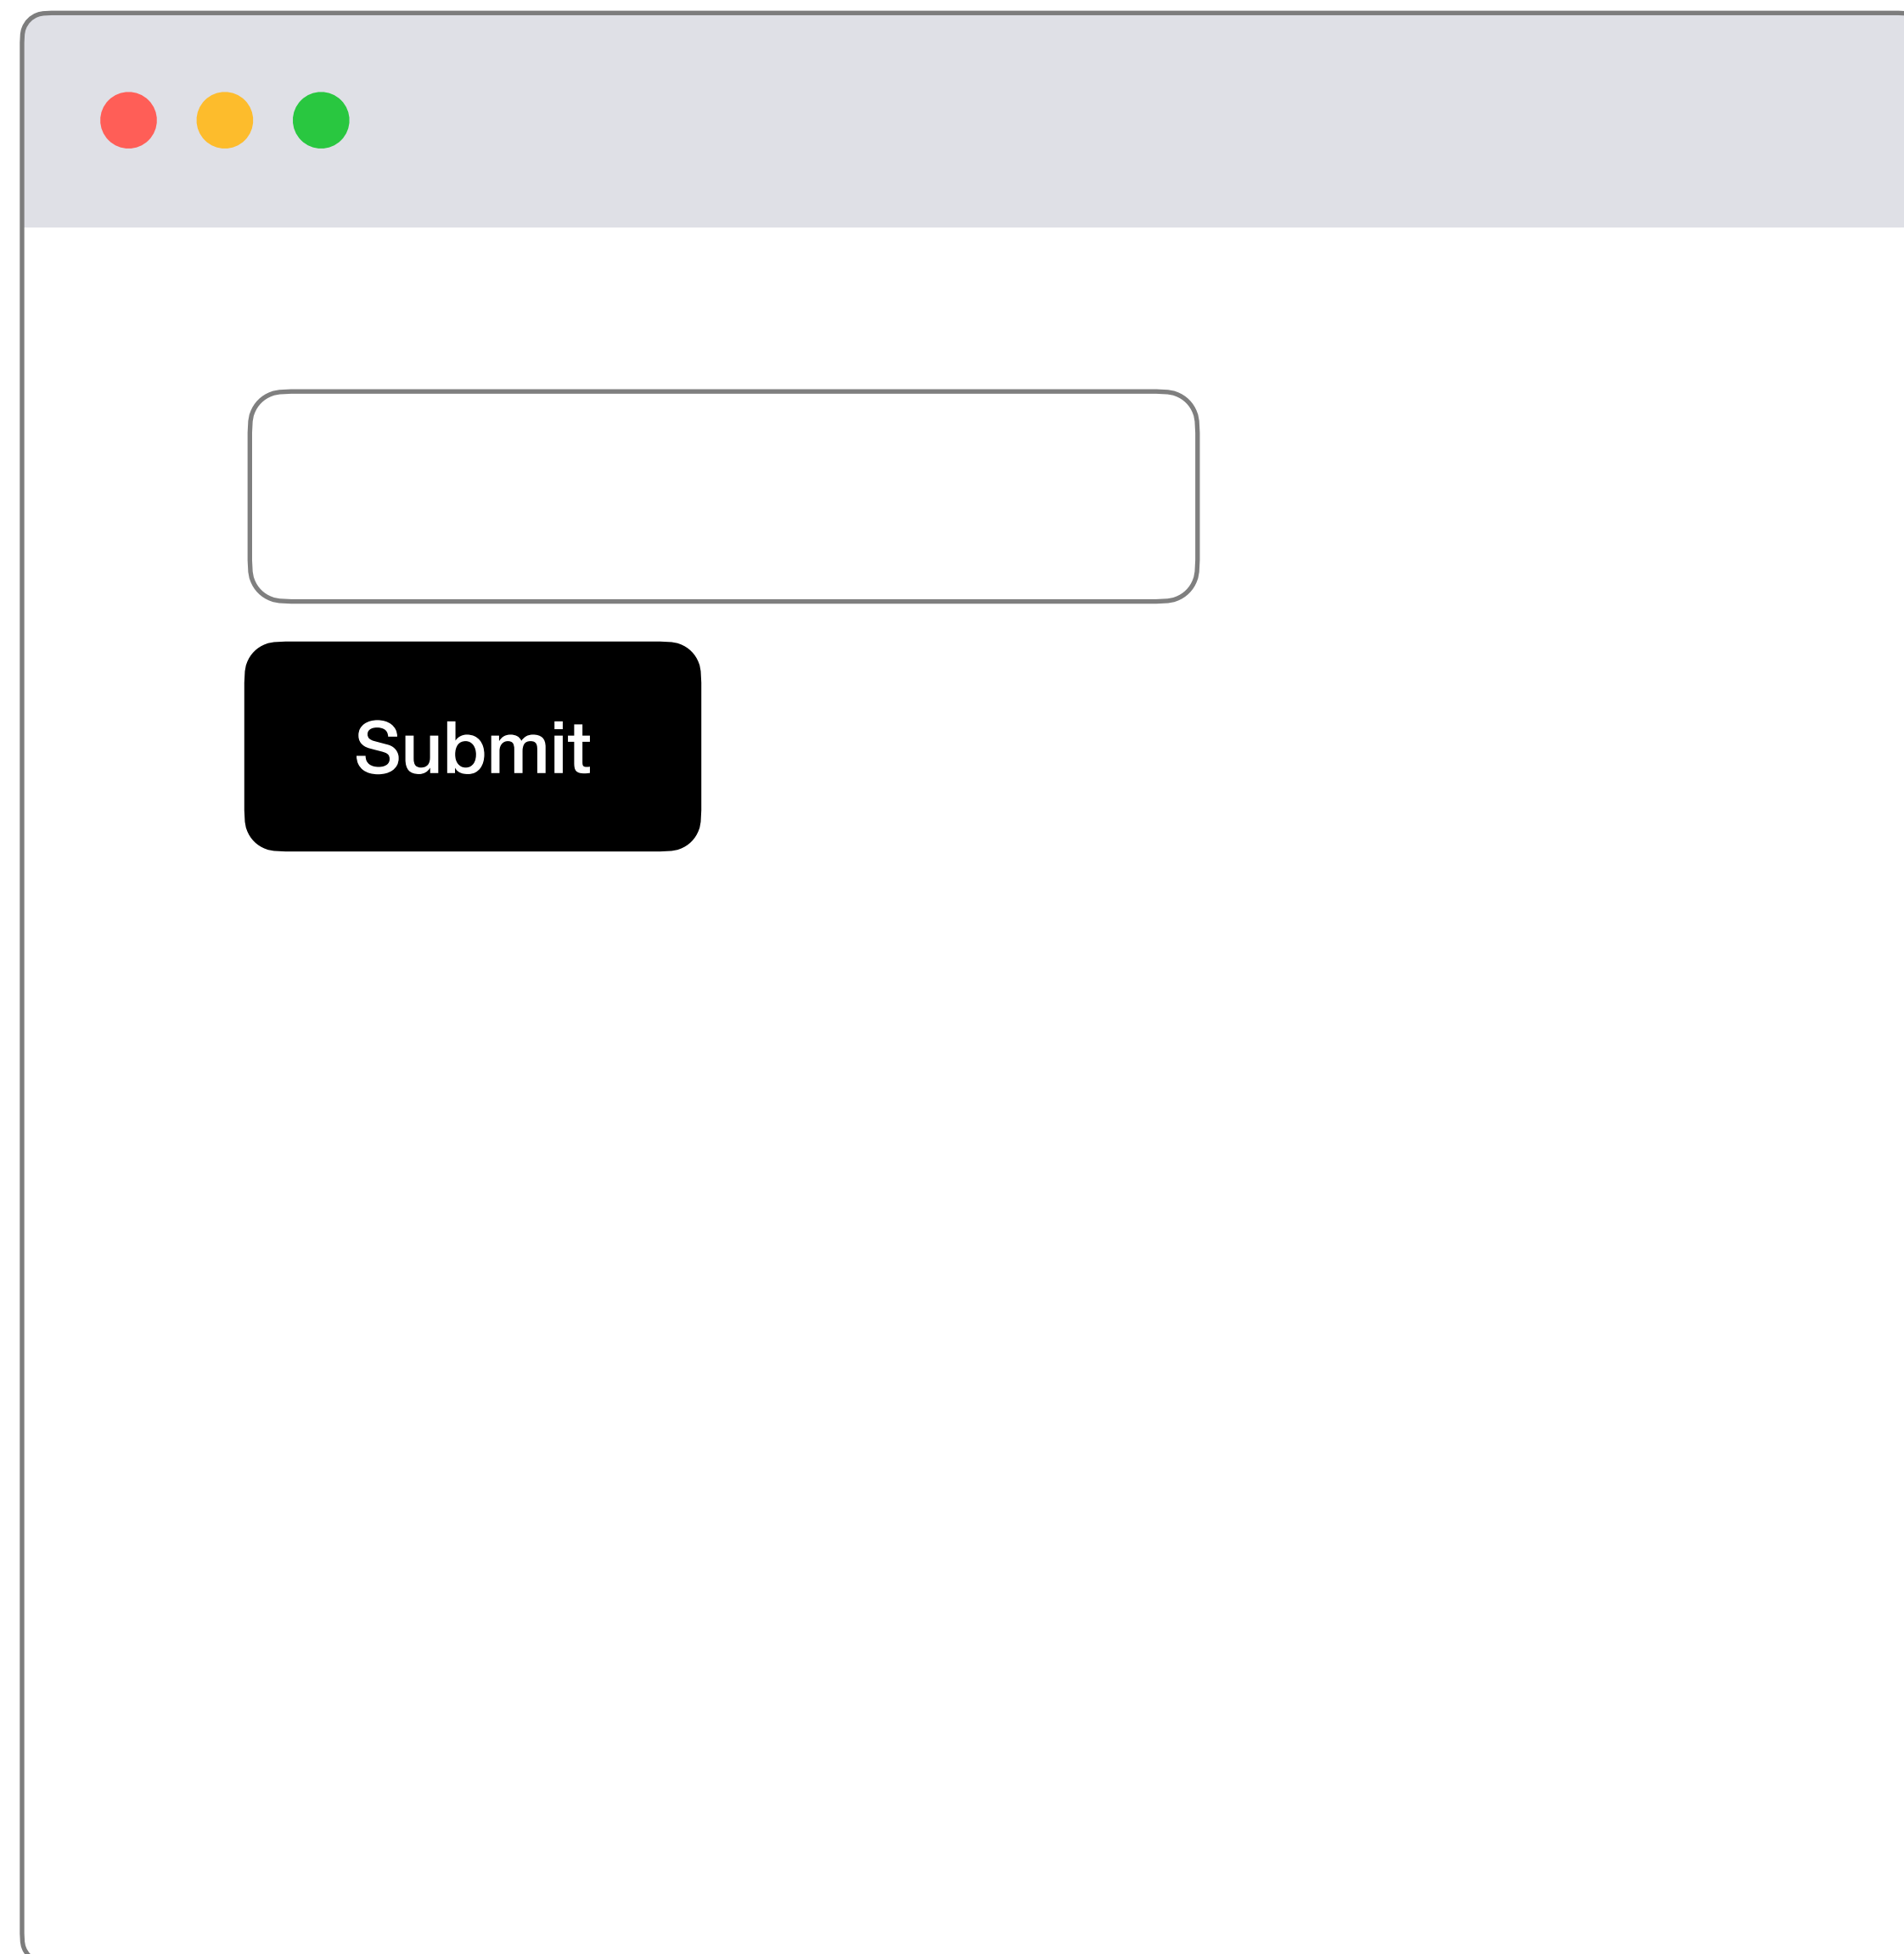

A browser window with a light gray title bar containing three colored window control buttons (red, yellow, green). The main content area is white and displays a simple form consisting of a single rounded rectangular text input field positioned above a submit button.

```
<form>
  <input type="text">
  <button type="submit">
    Submit
  </button>
</form>
```

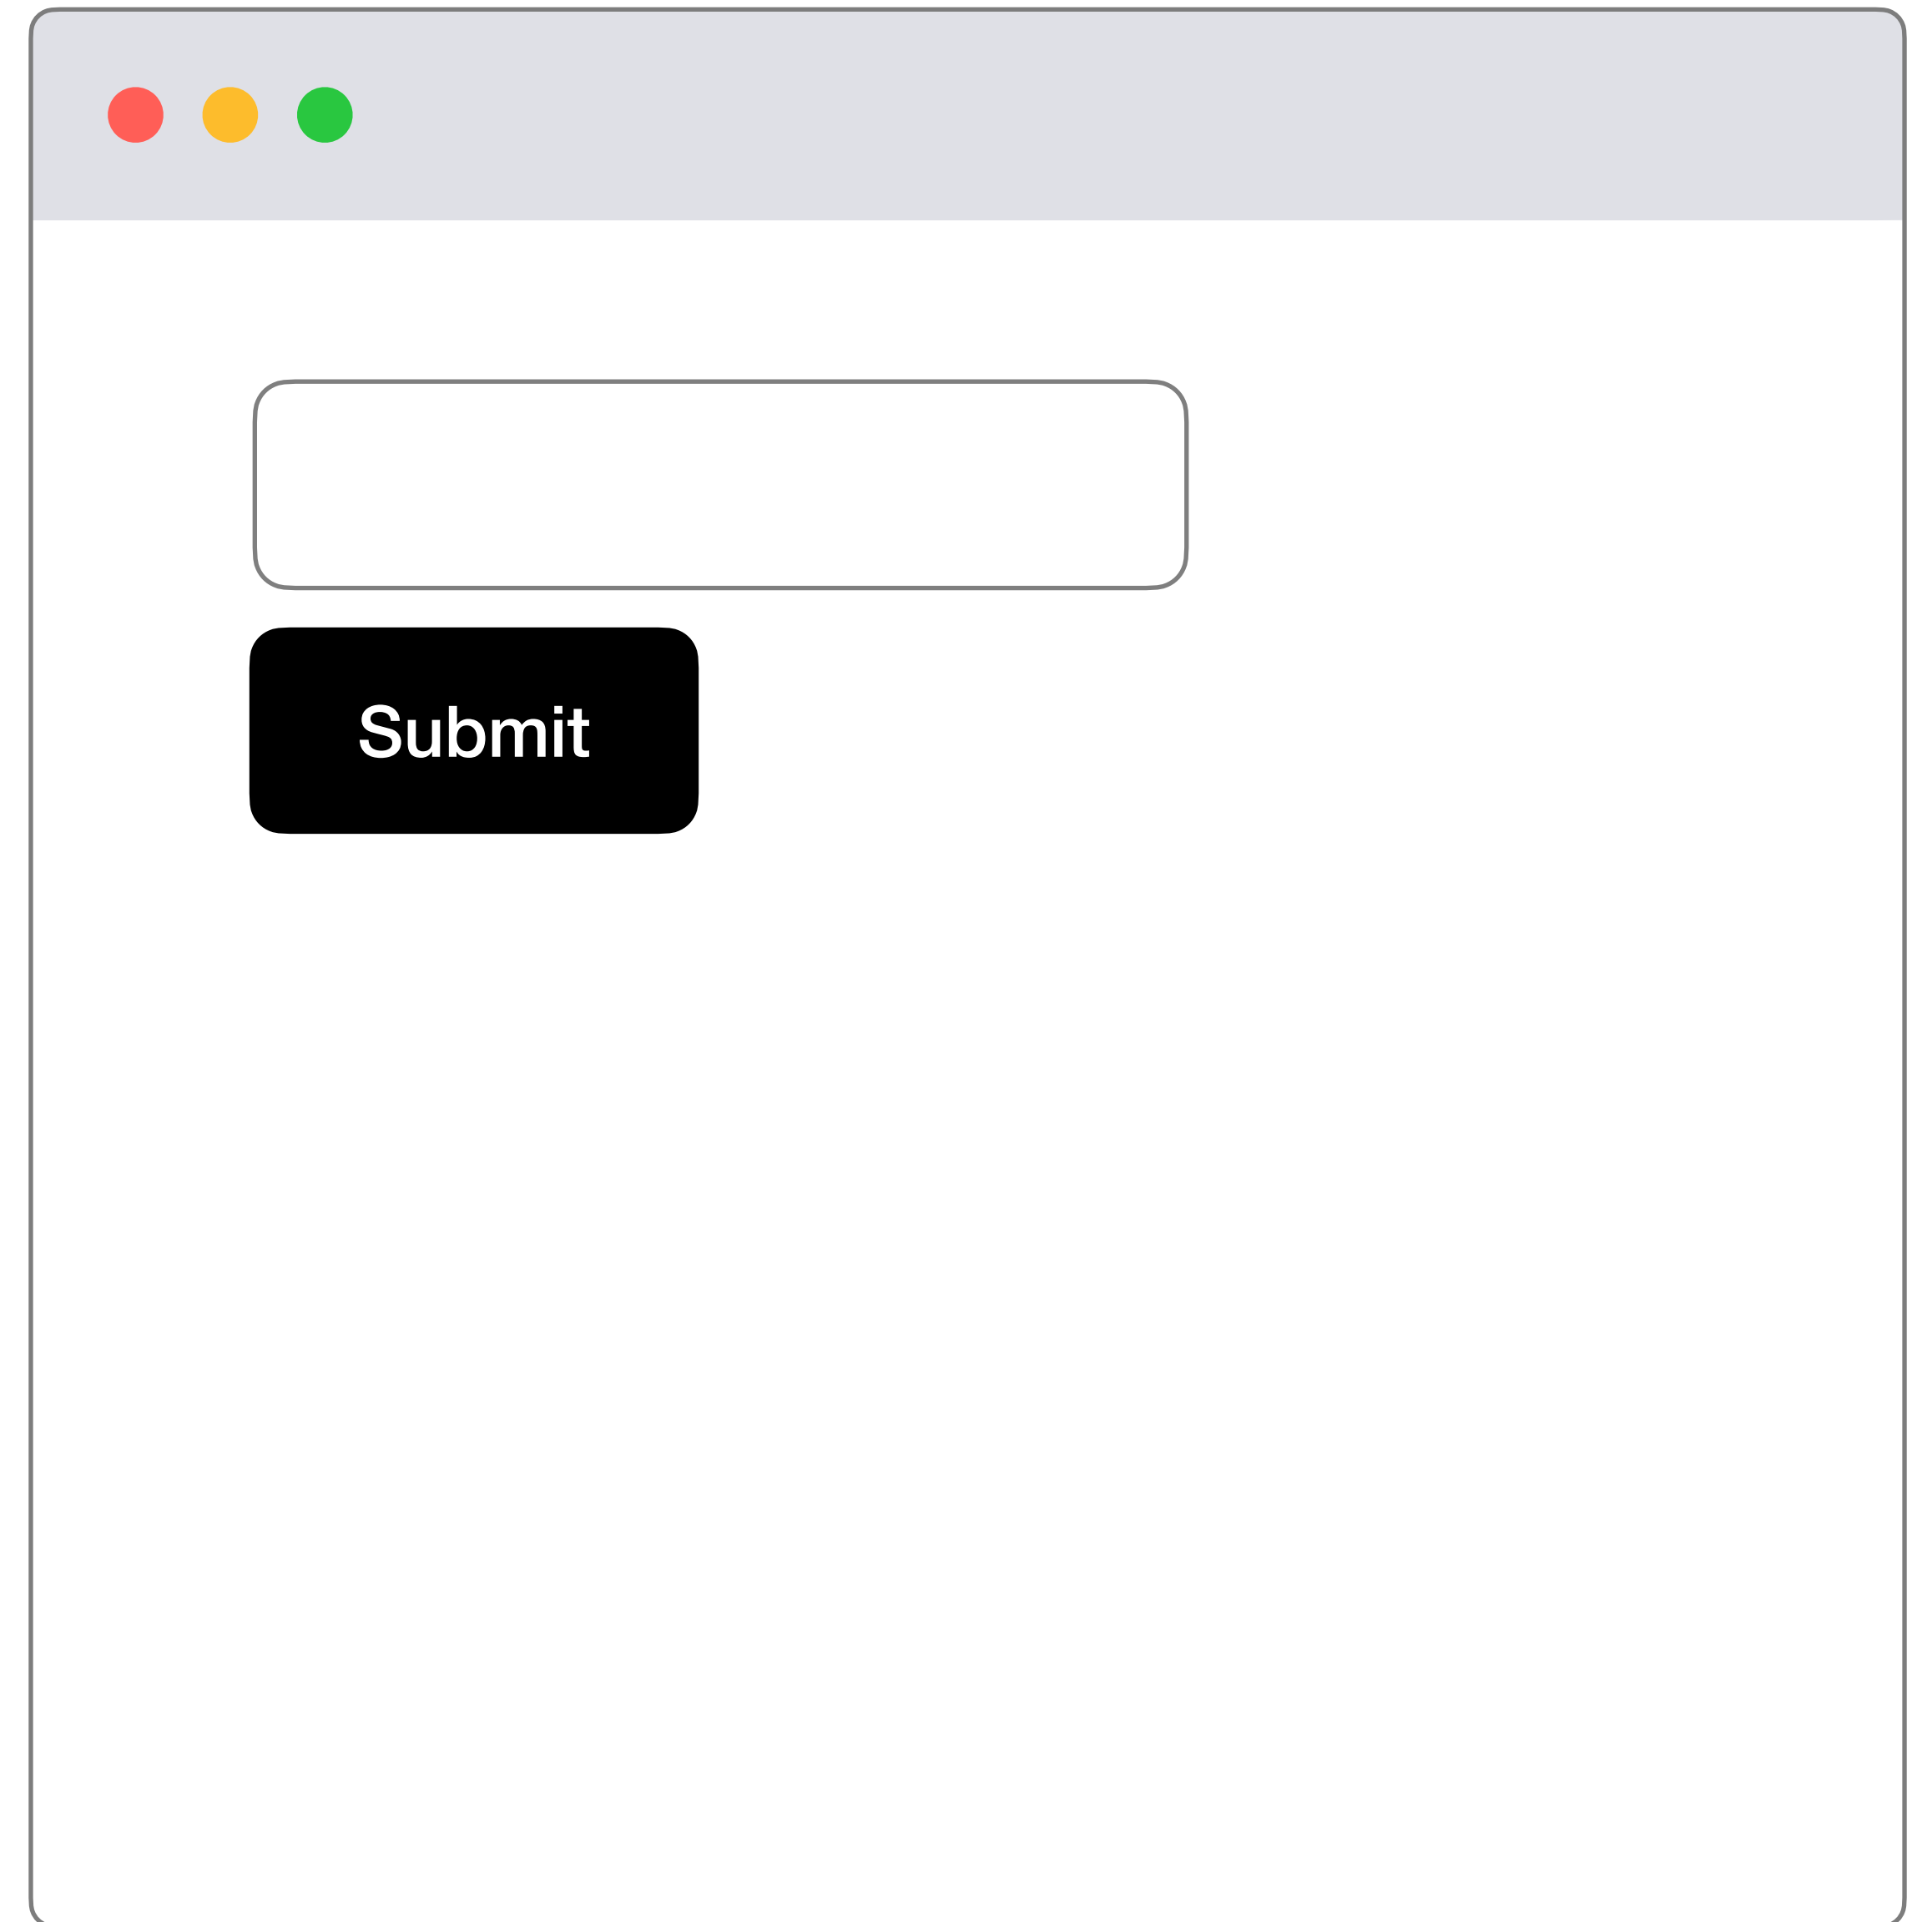

A browser window with a light gray title bar containing three colored window control buttons (red, yellow, green). The main content area is white and contains a simple form. At the top of the form is a white text input field with rounded corners and a thin gray border. Below the input field is a black button with rounded corners and the word "Submit" written in white text.

```
<form>  
  <input type="text">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

A browser window with a light gray title bar containing three colored window control buttons (red, yellow, green). The main content area is white and displays a simple form. At the top of the form is a white text input field with rounded corners and a thin gray border. Below the input field is a black button with rounded corners and the word "Submit" written in white text.

```
<form action="/" method="post">  
  <input type="text">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

A browser window with a light gray title bar containing three colored window control buttons (red, yellow, green). The main content area is white and contains a form with a single text input field and a black button labeled "Submit".

# Route to request

```
<form action="/" method="post">  
  <input type="text">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

A visual representation of the HTML form rendered in a browser window. The window has a light gray title bar with three colored window control buttons (red, yellow, green) on the left. The main content area is white and contains a single text input field with rounded corners and a thin gray border. Below the input field is a black rectangular button with rounded corners and the word "Submit" written in white text.

# Request method

```
<form action="/" method="post">  
  <input type="text">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

A screenshot of a web browser window. The window has a light gray title bar with three colored window control buttons (red, yellow, green) on the left. The main content area is white and contains a simple form. At the top of the form is a white text input field with rounded corners and a thin gray border. Below the input field is a black button with rounded corners and the word "Submit" written in white text.

## Python

```
request.form.get("email")
```

## HTML

```
<form action="/" method="post">  
  <input name="email">  
  <button type="submit">  
    Submit  
  </button>  
</form>
```

# HTML Form Elements

- `<input>`
  - `<input type="text">`
  - `<input type="number">`
  - `<input type="checkbox">`

# Databases

```
sqlite> CREATE TABLE responses (  
...>   id INTEGER,  
...>   name TEXT,  
...>   PRIMARY KEY(id)  
...> );
```

responses

id	name

```
sqlite> INSERT INTO responses (name)
...> VALUES ('Carter');
```

responses

id	name

```
sqlite> INSERT INTO responses (name)
...> VALUES ('Carter');
```

responses

<b>id</b>	<b>name</b>
1	Carter

```
sqlite> INSERT INTO responses (name)
...> VALUES ('CeceLia');
```

responses

<b>id</b>	<b>name</b>
