1

Why Local Development?

- Offline work
- Customizable environment
- Simplicity and speed

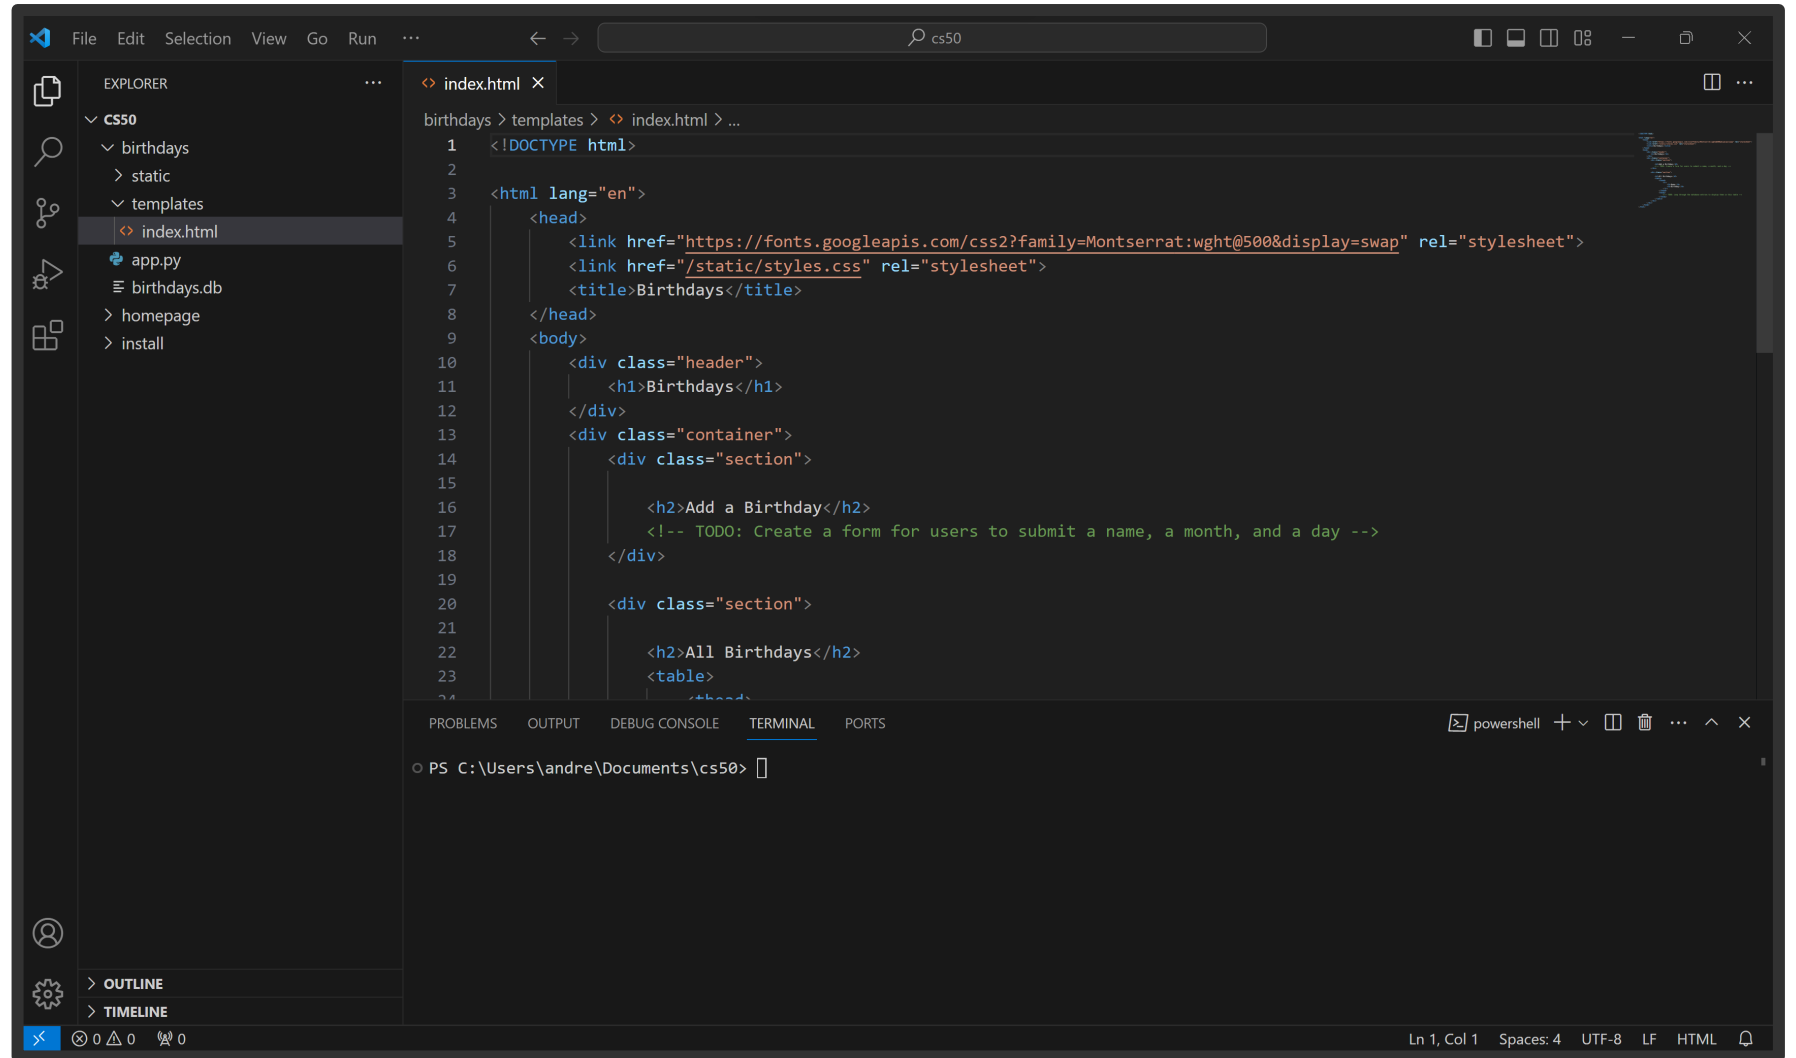

Why not Local Development?

- Pain to setup
- Hardware limitations
- Hardware dependent behavior
- Security

VSCode

- Familiar!
- Powerful!
- Common!

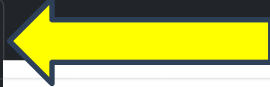

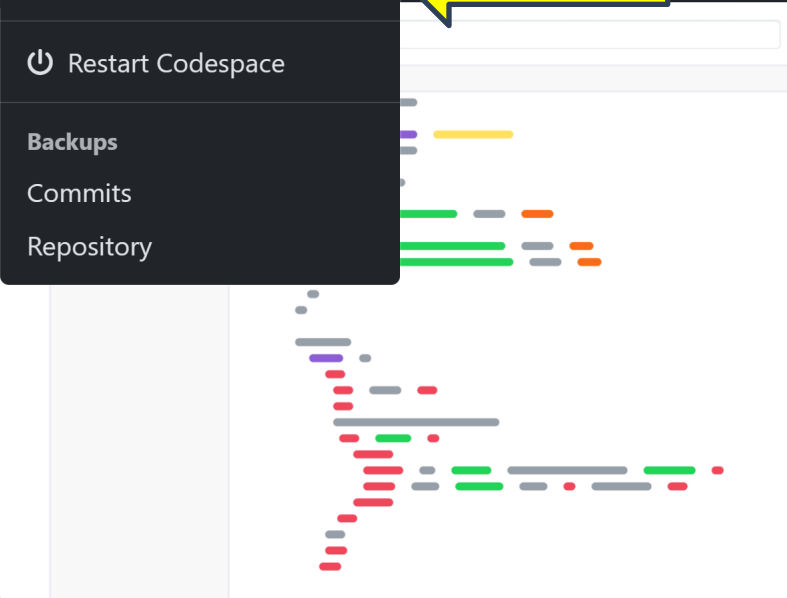

Visual Studio Code for CS50

CS50's adaptation of **Codespaces** for students and teachers

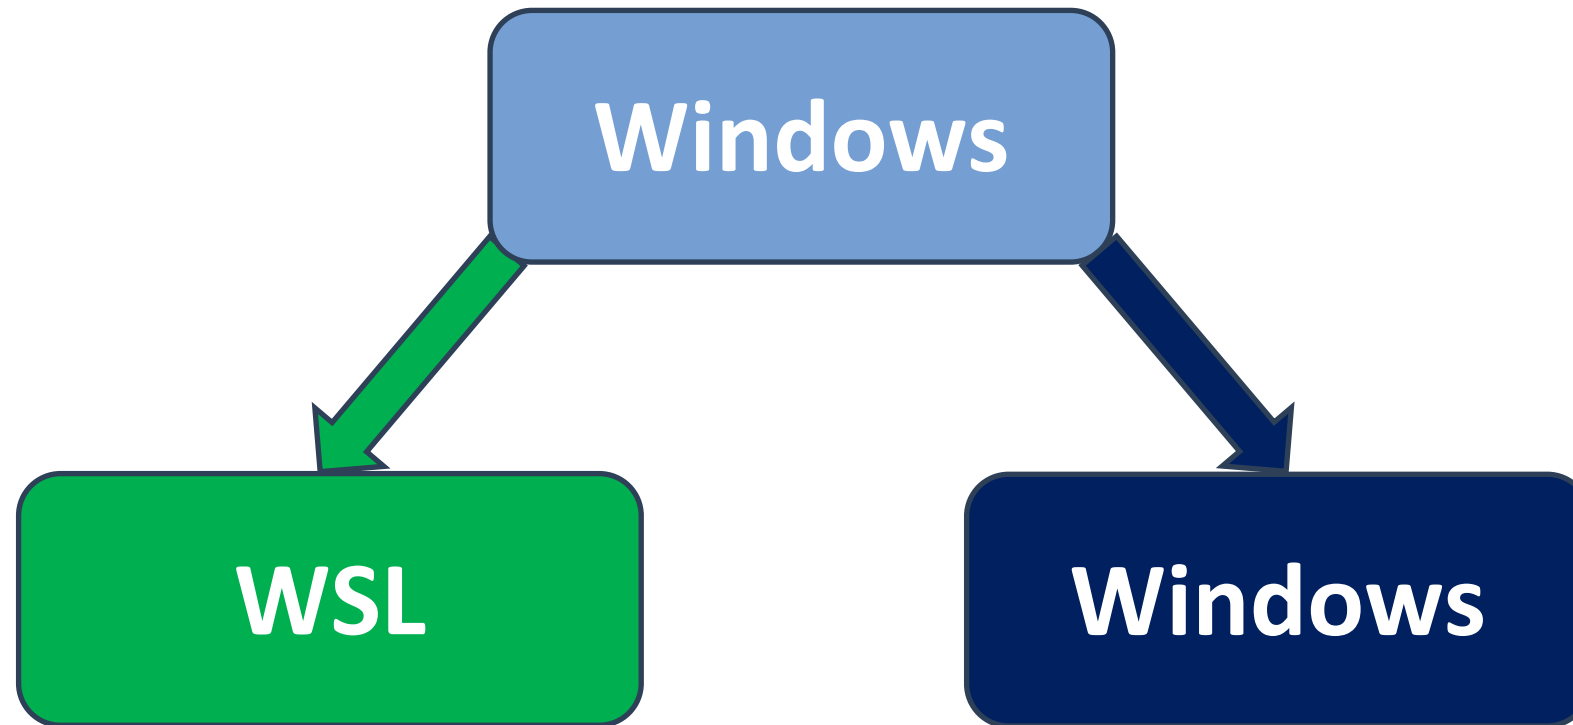

▶ with these features

 Log In  or browse [documentation](#)

-  Open in VS Code Desktop 
-  Restart Codespace
- Backups**
- Commits
- Repository

Local Development on Windows

Why WSL?

Pros

- More similar to CS50 tools.
- Easier to install once setup.
- Linux / unix system better compatibility.

Cons

- Some overhead.
- Demanding to run.
- It's not as good as just running Linux :P

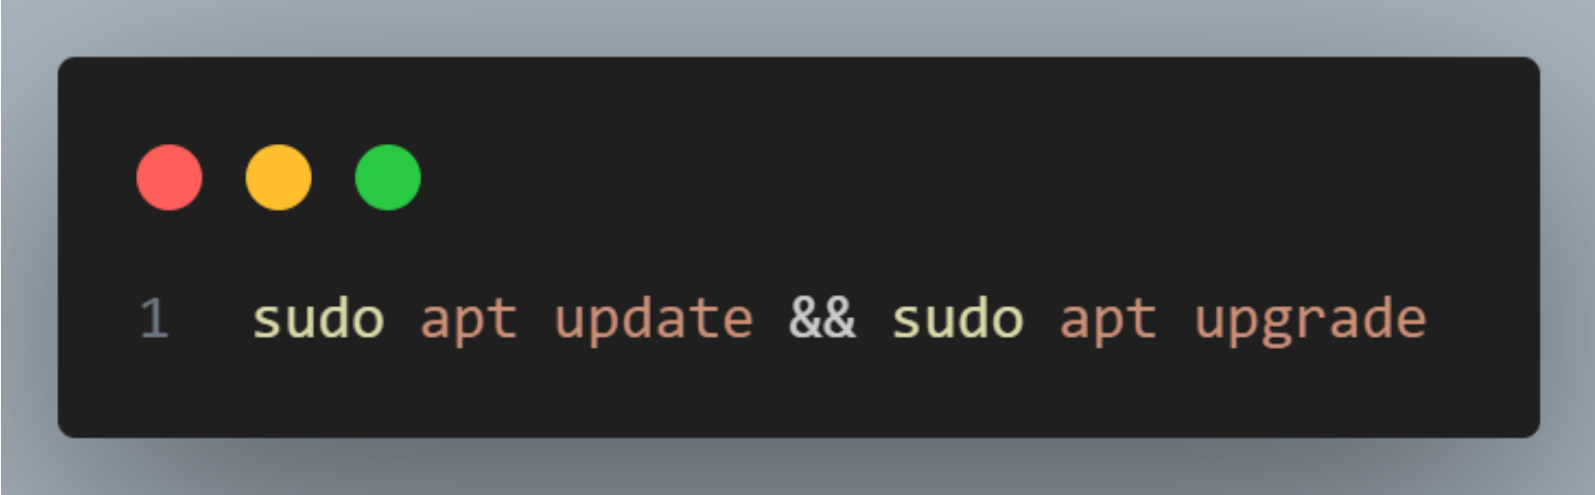

Install WSL

```
1 Terminal> wsl --install  
2 // Restart after setup!
```

<https://learn.microsoft.com/en-us/windows/wsl/install>

Setup WSL

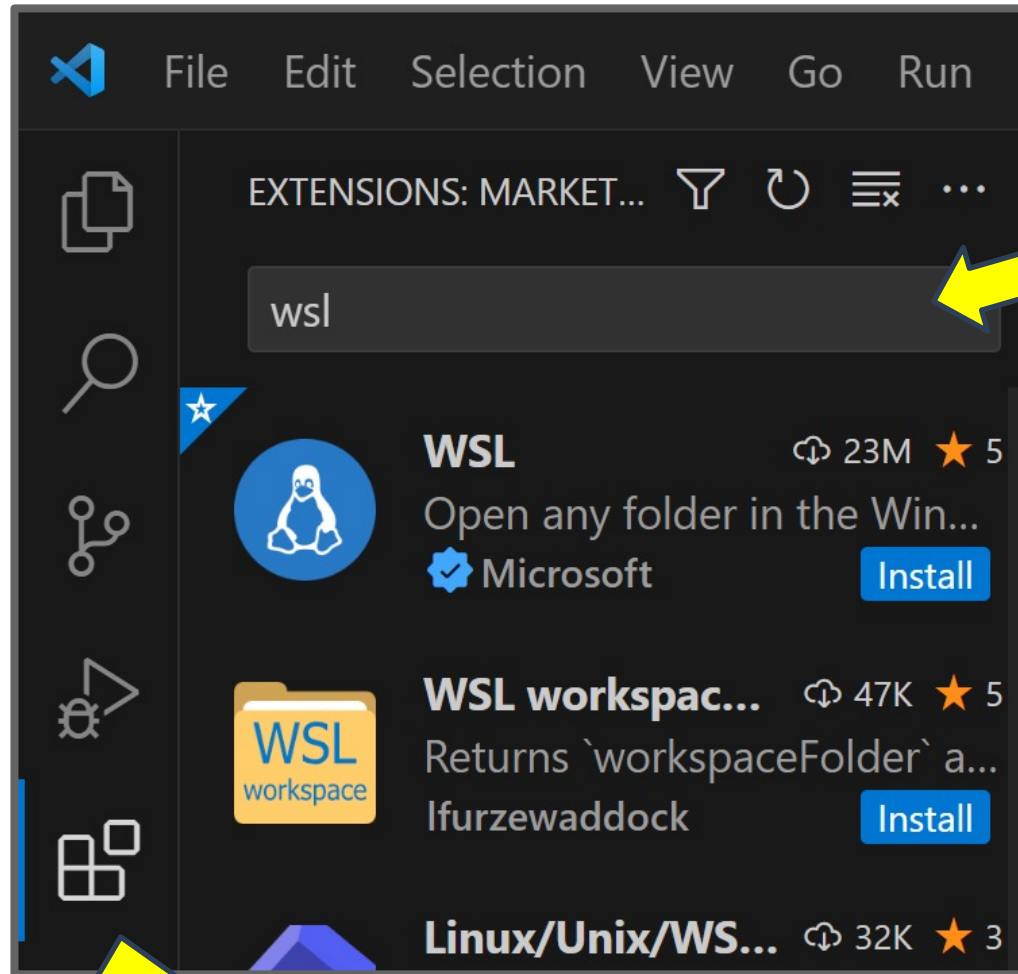

A terminal window with a dark background and a light gray border. At the top left, there are three colored circles: red, yellow, and green. Below them, the text '1 sudo apt update && sudo apt upgrade' is displayed in a light-colored font.

```
1 sudo apt update && sudo apt upgrade
```

Sudo: super user do

(Windows equivalent: run as administrator)

Setup VSCode + WSL

Search for the **WSL** extension and press 'install'.

The extension tab is the one with the four cubes, one being added to the pile of three!

File Edit Selection View Go Run ...

OUTLINE

TIMELINE

Ln 1, Col 1 Spaces: 4 UTF-8 LF HTML

Already installed for us

```
1 # We can run Python with:  
2 python3  
3  
4 # Git is also already installed  
5 git --version
```

Things we are missing 😞

There's plenty we are missing though! Not to worry, installing all of these on Linux is super easy.

Note: you may want to update your python and git installations.

```
1 # C compiler such as
2 gcc
3
4 # Make tools
5 make
6
7 # Flask, other python libraries
8 flask run
9
10 # http-server, sqlite3 and more...
```

Things we are missing 😞

```
1 # Install a C compiler and the make tool!  
2 sudo apt install gcc  
3 sudo apt install make  
4  
5 # Install sqlite3!  
6 sudo apt install sqlite3
```

Things we are missing 😞

```
1 pip3 install flask
2 pip3 install flask_session
3 pip3 install cs50
```

VSCode Extensions

- **Live Server**
- **Live Share**
- **C / Python**
- Codesnap
- Plenty of others!

Working on a final project together demo!

A million more options

There's a world of possibilities for you to explore!
Customize to your heart's content!

Local development with just pure Windows is often still
useful.

Install other tools that you need!

Thanks!

Hopefully this was useful! I'll try to help out in the comments when I have time!
